Compressed air treatment

BASIC PRINCIPLES OF MOST TYPICAL COMPRESSED AIR APPLICATION

1 COMPRESSOR

The basic working principle of an air compressor is to compress atmospheric air, which is then used as per the requirements. In the process, atmospheric air is drawn in through an intake valve; more and more air is pulled inside a limited space mechanically by means of piston, impeller, or vane.

Since the amount of pulled atmospheric air is increased in the receiver or storage tank, volume is reduced and pressure is raised automatically. In simpler terms, free or atmospheric air is compressed after reducing its volume and at the same time, increasing its pressure.

There are three major types, namely, reciprocating, rotary, and centrifugal compressor.

2 CYCLONE CONDENSATE SEPARATOR

Cyclone condensate separators use centrifugal motion to force liquid water out of compressed air.

The spinning causes the condensate to join together on the centrifugal separators walls when the condensate gains enough mass it falls to the bottom of the separator bowl where it pools in the sump until it is flushed out of the system by the automatic float drain valve.

They are installed following aftercoolers to remove the condensed moisture.

3 PRESSURE VESSEL

Pressure vessel plays very important role in compressed air system:

- damping pulsations caused by reciprocating compressors,
- providing a location for free water and lubricant to settle from the compressed air stream,
- supplying peak demands from stored air without needing to run an extra compressor,
- reducing load/unload or start/stop cycle frequencies to help screw compressors run more efficiently and reduce motor starts,
- slowing system pressure changes to allow better compressor control and more stable system pressures.

4 COMPRESSED AIR DRYER

Compressed air leaving the compressor aftercooler and moisture separator is normally warmer than the ambient air and fully saturated with moisture. As the air cools the moisture will condense in the compressed air lines. Excessive entrained moisture can result in undesired pipe corrosion and contamination at point of end use.

For this reason some sort of air dryer is normally required.

Some end use applications require very dry air, such as compressed air distribution systems where pipes are exposed to winter conditions. Drying the air to dew points below ambient conditions is necessary to prevent ice buildup.

Common types:

- refrigerant
- desiccant
- membrane

END USER

- Replace inappropriate end use applications with efficient models (vortex nozzles, atomizers).
- Install a flow controller to lower plant pressure and reduce artificial demand caused by higher than required pressures.
- Turn off air consuming equipment, using electric solenoids or manual shutoff valves.
- Avoid operation of air tools without a load, as this consumes more air than a tool under load.
- Replace worn tools, as they often require higher pressure and consume excess compressed air than tools in good shape.
- Lubricate air tools as recommended by the manufacturer. Keep air used by all end uses free of condensate in order to maximize tool life and effectiveness.
- Where possible and practical, group end use air equipment that has similar air requirements of pressure and air quality.

5 CONDENSATE DRAIN

Drains are needed at all separators, filters, dryers and receivers in order to remove the liquid condensate from the compressed air system.

Failed drains can allow slugs of moisture to flow downstream that can overload the air dryer and foul end use equipment.

6 FILTER

Compressed air filters are used for high efficient removal of solid particles, water, oil aerosols, hydrocarbons, odour and vapours from compressed air systems. To meet the required compressed air quality appropriate filter element must be installed into filter housing.

7 ACTIVATED CARBON TOWER

Activated carbon tower eliminates hydrocarbon vapours and odours from compressed air. Towers are filled with activated carbon adsorbent that adsorbs contaminants onto the surface of its internal pores. Activated carbon towers are used at applications where content of oil vapours needs to be reduced to minimum.

Activated carbon towers can be incorporated in existing compressed air systems significantly minimising the risks of contamination. They are able to absorb oil carry-over (both liquid and vapour) to provide the plant with technically oil-free compressed air.

8 OIL/WATER SEPARATOR

Local environmental laws and regulations state that condensate drained from compressed air systems cannot be returned to the sewage system due to the content of compressor lubricating oil.

Water/oil separators are one of the most effective and economical solution. Multi-stage separation process using oleophilic filters and activated carbon, ensures exceptional performance and trouble free operation.

9 CONDENSATE DISTRIBUTOR

WOS CD is intended for systems, where amount of generated condensate exceeds capacity of single largest available WOS water oil separator. WOS CD can evenly distribute collected condensate between up to three WOS-35 water oil separators. WOS CD is equipped with flow distributor on the inlet port and up to 8 hose tail connections mounted.

10 CONTROL SYSTEM

It is always good to know the parameters value of your compressor air station. The control system with integrated sensors records and controls all important parameters:

- pressure
- temperature
- Dew point
- flow

REFRIGERATED COMPRESSED AIR DRYERS

EDT SERIES

REFRIGERATED AIR DRYERS

operating pressure	up to 16 bar
max. ambient temp.	50 °C
pressure dew point	3°C
flow rate	30 to 1620 m³/h
max. inlet air temp.	70 °C

DESCRIPTION

The EDT series of energy saving refrigeration dryers offers important advantages in terms of energy saving, reliability and operating costs. The regulation system of the dryer controls the dryer operation granting the most energetically effective method of compressed air drying, achieving high energy saving and ensuring at the same time an excellent dew point stability also in dynamic conditions.

The EDT series is a synonym for high efficiency heat exchanger, highest energy savings, minimum pressure drops, lowest environmental impact, reduced carbon footprint, easy installation, easy serviceability and maximum reliability.

Temperature [°C]	20	25	30	35	40	45	50
Correction factor K3	1,05	1,00	0,95	0,89	0,84	0,78	0,72

CORRECTION FACTOR FOR DEW POINT CHANGES

Temperature [°C]	3	5	7	9
Correction factor K4	1,00	1,12	1,24	1,38

CORRECTION FACTOR FOR INLET AIR TEMPERATURE CHANGES

Operat. pressure [bar(g)]	30	35	40	45	50	55	60	65	70
Correction factor K2	1,23	1,00	0,81	0,66	0,57	0,52	0,48	0,44	0,40

Data refers to the following working conditions: air FAD 20 °C / 1bar A, pressure 7 bar(g), ambient temperature 25 °C, air inlet temperature 35 °C, pressure dew point 3 °C, according to ISO 8573.1 standard humidity class 4.

Weights are net (without packing and for timed drain configuration). Refrigerant fluids: R134a (EDT 5-80), R404A (EDT 100-270). Protection class IP22.

Maximum working pressure 16 bar(g); maximum ambient temperature 50 °C; maximum inlet temperature +70 °C (EDT 5-80), +60 °C (EDT 100-270).

The correction factors in the following table should be used as a guide only; for accurate selection at conditions differing from the above the selection software should be utilised.

CAPACITY correction factors (indicative values): CAPACITY = RATED VALUE 7 bar(g) x K1 x K2 x K3 x K4.

ADSORPTION COMPRESSED AIR DRYERS

A-DRY SERIES HEATLESS ADSORPTION DRYERS

operating pressure	4 to 16 bar
operating temperature	1,5 to 50 °C
pressure dew points	-40°C (-25°C/-70°C)
flow rate	6 to 200 Nm³/h

DESCRIPTION

A-DRY desiccant adsorption dryer has been designed to separate water moisture from compressed air thus reducing the dew point in the system. A-DRY is a range of products offering our customers a wide array of dried air solutions with volumetric flow rates ranging from 6 to 200 Nm³/h.

An innovative new design of A-DRY adsorption driers, developed with consideration of our customers, enables fast and reliable installation, use and servicing. Installation is simple with our ready to use controller while minimising the number of parts and motions required for assembly and disassembly makes servicing fast and reliable.

ADSORPTION COMPRESSED AIR DRYERS

X-DRY SERIES

HEATLESS REGENERATED MODULAR ADSORPTION DRYERS

operating pressure	4 to 16 bar
operating temperature	1,5 to 50 °C
pressure dew points	-40°C (-25°C/-70°C)
flow rate	300 to 1050 Nm ³ /h

DESCRIPTION

X-DRY 300-1050 modular adsorption dryers are designed for continuous separation of water vapour from compressed air thus reducing dew point. Operation of dryer requires two columns operated alternately.

Adsorption takes place under pressure in first column while second column regenerates with a portion of already dried compressed air at ambient pressure.

A dryer consists of two columns, filled with desiccant beads, controller with LCD display, valves, manometers, support construction and suitable filter housings with the required filter element. Proven robust design enables efficient and reliable operation, fast installation and simple maintenance.

ADSORPTION COMPRESSED AIR DRYERS

B-DRY SERIES

HEATLESS REGENERATED ADSORPTION DRYERS

operating pressure	4 to 16 bar
operating temperature	1,5 to 60 °C
pressure dew points	-40°C (-25°C/-70°C)
flow rate	110 to 1000 Nm ³ /h

DESCRIPTION

B-DRY adsorption dryers are designed for continuous separation of water vapour from the compressed air thus reducing the pressure dew point. B-DRY series dryer consists of two columns, filled with desiccant beds, controller with LCD display, valves, manometers, support construction and suitable filter housings with the required filter element. Adsorption takes place under pressure in the first column while the second column regenerates with a portion of already dried compressed air at ambient pressure.

When the first column is saturated to a certain level column switch-over is carried out and the process of adsorption continues in the second column without any drop of pressure at the outlet of the dryer. Regeneration of saturated desiccant is possible because a small portion of already dry compressed air is decompressed and when expanded it becomes extremely dry.

COMPRESSED AIR FILTERS

AF SERIES ALUMINIUM COMPRESSED AIR FILTERS

operating pressure	16 bar
volume flow rate	60 to 2760 Nm ³ /h
connections	3/8" to 3"
operating temp. range	1,5 to 65 °C
standard colour	RAL 5012

DESCRIPTION

AF filter housings are designed for high efficient removal of solid particles, water, oil aerosols, hydrocarbons, odour and vapours from compressed air(1) systems. To meet the required compressed air quality appropriate filter element (B, P, R, M, S, A, A2, H2, MS2) must be installed into filter housing.

(1) For any other technical gas please contact producer or your local distributor.

¹⁾ B filter element can be cleaned with ultrasonic bath or with back flushing. Intervals of cleaning depends of application. If necessary replace filter element with new one.

²⁾ Filter elements "A, A², H²", must be changed periodically to suit application, but at least every 6 months. Activated carbon filters must not operate in oil saturated conditions.

³⁾ Valid if "S" filter cartridge is installed upstream.

⁴⁾ For elements A², H² and MS² it is necessary to reduce the flow according to technical data sheet specification.

CONDENSATE SEPARATORS

CKL-B SERIES

ALUMINIUM CYCLONE CONDENSATE SEPARATORS

operating pressure	16 bar
volume flow rate	120 to 2850 Nm ³ /h
connections	3/8" to 3"
operating temp. range	1,5 to 65 °C
standard colour	RAL 9005

DESCRIPTION

CKL-B condensate separators are designed for high efficient removal of bulk liquids from compressed air and vacuum systems. Inside the housing there is an insert with vanes that creates controlled rotation of the air.

As a result of centrifugal action liquids (water, oil) and large particles are forced to the housing wall, slowed down and accumulated at the bottom of separator housing as condensate. The turbulent free zone in the lower part of the filter housing prevents condensate from being picked up and "carried over" into the airstream.

To discharge condensate from the CKL-B cyclone separator it is essential to install automatic or electronic condensate drain.

DIFFERENTIAL PRESSURE INDICATORS

DESCRIPTION

Pressure drop indicator is designed to indicate pressure drop across the filter element in compressed air system. It detects when the filter cartridge is clogged and should be replaced. It is typically installed on the head of the filter housing. It be used in variety of applications. For applications not listed please contact producer or your local distributor.

APPLICATIONS

- automotive
- electronics
- food & beverage
- chemical
- petrochemical
- plastics
- paint
- general industrial application

CONDENSATE DRAINS

EMD SERIES

ELECTRONIC CONDENSATE DRAINS

operating pressure	16 bar
drain capacity	up to 75 l/h
connections	1/2"
operat. temp. range	1,5 to 65 °C

DESCRIPTION

EMD12 series drain is designed for fully automatic discharging of condensate or any other non-aggressive fluid from compressed air system. The units can be installed as external drain on any application specified.

Condensate accumulates in the collecting reservoir. When the level is high enough condensate is being discharged from the system without any air losses. Fluid level is detected by precise capacitive level sensor.

Special self-cleaning direct acting valve assures reliable operating. EMD series is also equipped with operation alarm, led indicator, test button and internal strainer. Version with Service Network for diagnostics parameter setting and alarm output is also available.

AOK 20B

AUTOMATIC CONDENSATE DRAIN

TECHNICAL DATA	
Operating temperature range	1,5- 65 °C (35-149 °F)
Operating pressure	20 bar (290 psi)
Mass	0,6 kg
Discharge capacity (at 7 bar/101 psi)	167 l/h
Inlet connection	G 1/2" (NPT option)
Outlet connection	G 1/2" (NPT option)
Dimensions A x B x C	135 x 110 x 130 mm
Medium	Condensate (air, water, oil)

RECOMMENDATIONS

Install ball valve between pressure vessel and inlet connection.
Install strainer element between pressure vessel and inlet connection.
Install nipple with venting tube to avoid generation of air bubbles.
Nipple is screwed on inlet connection.

AOK 16B

AUTOM. COND. DRAIN

TECHNICAL DATA	
Operating temp. range	1,5- 65 °C (35-149 °F)
Operating pressure	0 - 16 bar (0 - 232 psi)
Mass	0,04 kg
Connection	G 1/2"
Outlet connection	ø8
Dimensions H x D	90 x ø38,5 mm
Medium	Condensate (air, water, oil)

MCD

MANUAL COND. DRAIN

TECHNICAL DATA	MCD	
Operating temp. range	1,5- 65 °C (35-149 °F)	
Operating pressure	0-20 bar (290 psi)	
Mass	0,06 kg	
Connection	G 1/2"	
Dimensions	H	38,2 mm
	E	24,0 mm
Medium	Condensate (air, water, oil)	
Material	brass	

ACCESSORIES

OCI

OIL CONTENT INDICATOR

OCI oil content indicator has been designed to monitor oil content in pressure vessels and receivers where air quality is critical. It is calibrated to detect aerosol-mist level of oil with sensitivity down to 0,01 PPMm (0,012 mg/m³). Replacement cartridge is available when original is worn out.

TYPE	OCI A-4000-120
Connection	G1/8"
Dimensions	166 x 16,2 mm
Mass	0,134 kg
Pressure range	0,68- 16 barg
Oper. temp. range	1,5 °C to 49 °C
Measuring range	0- 25 PPM(m) at 20 °C ; 0- 30 mg/m ³

WS/WM

WALL MOUNTING KIT FOR FILTERS

Wall mounting kits have been developed to easily mount filter on the wall or other surface. The kit contains 2 stainless steel consoles (which are mirrored) and 6 self-tapping screws.

TYPE	WS	WM
Fits to filter housings	AF 0056- AF 0106	AF 0186- AF 0706
Operating temp.	-20 to +120 °C	(-4 to 248°F)
Max. load/console kit (kg)	6	15
Mass (kg)	0,35	0,6
Material	Stainless steel	

AK

ASSEMBLY KIT FOR FILTERS

Assembly kits have been developed to connect two or more air filters together. Construction of assembly kit is universal and it can be used for any type of filter, including filters of some other world producers. It is easy to connect two filters together and it includes supporting elements for easy mounting on the wall or other surface.

Type	Connection	Operating temp.	Operating pressure	Max. load/console	Mass
AK 3/8"	3/8"	1,5- 65°C	0- 20 bar	0,47	0,3
AK 1/2"	1/2"	1,5- 65°C	0- 20 bar	0,47	0,3
AK 3/4"	3/4"	1,5- 65°C	0- 20 bar	0,6	0,3
AK 1"	1"	1,5- 65°C	0- 20 bar	1,57	0,5
AK 1 1/2"	1 1/2"	1,5- 65°C	0- 20 bar	2,2	0,5
AK 2"	2"	1,5- 65°C	0- 20 bar	2,32	1,57
AK 2 1/2"	2 1/2"	1,5- 65°C	0- 20 bar	2,28	1,53
AK 3"	3"	1,5- 65°C	0- 20 bar	2,22	1,47

SG

SIGHT GLASS

Sight glass has been developed for easy checking level of condensate accumulated in the bottom of compressed air filter bowl. On every casted aluminium filter housing there is a pre casted area where sight glass can be mounted after appropriate holes are drilled.

TYPE	SG
Operating pressure	0 to 16 bar (0 to 232 psi)
Operating temp.	1,5 to +65 °C (35 to 149 °F)
Operating fluid	Air, water, oil
Mass (kg)	0,010
Material	PA12
Dimensions (mm)	59,0 x 20,5 x 11,0

2S, 3S, 2M, 3M

ASSEMBLY KIT FOR FILTERS

Assembly kits are used for manifold 2 or 3 AF type filters together, without using interconnecting piping.

Types are:

- 2S 2 x AF 0056 to AF 0106
- 3S 2 x AF 0056 to AF 0106
- 2M 3 x AF 0186 to AF 0706
- 3M 3 x AF 0186 to AF 0706

ES

EXHAUST SILENCER

ES series expansion silencers are designed for efficient noise reduction at variety of applications where compressed air is expanded/depressurised to ambient pressure.

Type	Connec.	Operating pressure	Operating temperature	Dimensions	
				ø [mm]	h [mm]
ES 06050	1/4"	0-13 bar	1,5 to +65°C	51	69
ES 14050	3/8"			51	127
ES 12075	1/2"			75	131
ES 22075	3/4"			75	231
ES 22090	1"			90	231
ES 32090	1 1/4"			90	333
ES 32140	1 1/2"			140	336
ES 45140	2"			140	462

OIL/WATER SEPARATION EQUIPMENT

WOSM SERIES

WATER - OIL SEPARATORS

operat. temp. range	1,5 to 45 °C
inlet connection	ø8 mm
DIBt number	Z-83.5-31

DESCRIPTION

WOSm water oil separators have been developed to separate lubricant oil from condensate generated in compressed air systems. Due to patented technology regular service can be done in 30 seconds without any cleaning.

Separation begins in "cyclonic depressurization chamber" and continues in "filter cartridge". When the "filter cartridge" is fully saturated you just simply unscrew complete cartridge and replace it with new one.

All the condensate stays in old cartridge which can also be sealed with plastic cover and disposed according to local directives and laws.

TECHNICAL DATA

Operating temperature		1,5- 45 °C (max 65 °C) ⁽¹⁾ ; 35- 113 °F (max. 149 °F) ⁽¹⁾									
Operating media		Condensate (air, water, oil); Non agresive; Not suitable for emulsion									
Residual oil content		< 20ppm									
Service interval		When first of following parametres appears:									
		- 4000 operating hours of compressor ⁽²⁾									
		- 12 months regardless of compressor operating hours									
		- when all white polypropylene media becomes yellow									

OIL/WATER SEPARATION EQUIPMENT

WOS SERIES WATER - OIL SEPARATORS

Z-83.5-31
(Deutscher Institut für
Bautechnik, Berlin)

operat. temp. range	1,5 to 45 °C
inlet connection	ø10 mm
DIBt number	Z-83.5-31

DESCRIPTION

WOS water oil separators have been developed to separate lubricant oil from condensate from compressed air systems. WOS water-oil separator can be used in variety of applications. For applications not listed please contact producer or your local distributor.

TECHNICAL DATA

Operating temperature		1,5- 45 °C (max 65 °C) ⁽³⁾ ; 35- 113 °F (max. 149 °F) ⁽³⁾					
Operating media		Condensate (air, water, oil); Non aggressive; Not suitable for emulsion					
Residual oil content		< 10ppm					
Service interval		When first of following parametres appears:					
		- 4000 operating hours of compressor ⁽⁴⁾					
		- 12 months regardless of compressor operating hours					
		- outlet oil concentration reaches concentration determined with local directives					
Technical data		Cold climate zone 15 °C 60 %RH	Mild climate zone 25 °C 60 %RH	Hot climate zone 40 °C 100 %RH	Dimensions [mm]		
					A	B	C
WOS-4	Max oil adsorption [kg]	2,89	2,43	1,23	416	243	411
	Max FAD [Nm³/min]/[scfm]	4,82/170	4,04/142	2,05/72,3			
	Max condensate flow [l/h]	2,3	3,4	6,3			
WOS-8	Max oil adsorption [kg]	6,01	5,04	2,55	730	343	680
	Max FAD [Nm³/min]/[scfm]	10,0/353	8,4/296	4,25/150			
	Max condensate flow [l/h]	4,7	7,1	13,1			
WOS-20	Max oil adsorption [kg]	14,64	12,28	6,22	820	366	940
	Max FAD [Nm³/min]/[scfm]	24,4/861	20,5/723	10,37/366			
	Max condensate flow [l/h]	11,4	17,2	32,0			
WOS-35	Max oil adsorption [kg]	25,4	21,31	10,79	960	386	1137
	Max FAD [Nm³/min]/[scfm]	42,3/1495	35,5/1254	17,99/635			
	Max condensate flow [l/h]	19,8	29,8	55,6			

Water quality test

Water quality test should be performed at least once per month, to control the contamination level of disposed condensate. If oil concentration is reached, oil filter cartridges must be changed.

⁽³⁾ Max. operating temperature is 65 °C, but when temperature is over 45 °C, performance may decrease.

⁽⁴⁾ At compressor oil carryover 2,5 mg/m³. Lower/higher oil carry over means proportionally longer/shorter lifetime (e.g. if oil carryover is 5mg/m³ lifetime reduces to 2000 operating hours).

OIL/WATER SEPARATION EQUIPMENT

WOS CD SERIES CONDENSATE DISTRIBUTOR

operat. temp. range	1,5 to 65 °C
inlet connection	3/4" to 3"
outlet hose connection	see specification

DESCRIPTION

WOS CD is intended for systems, where amount of generated condensate exceeds capacity of single largest available WOS water oil separator. WOS CD can evenly distribute collected condensate between up to three WOS 35 water oil separators.

WOS CD is equipped with flow distributor on the inlet port, up to 8 hosetail connections mounted on elbows for convenient outlet, manual ball valve for cleaning purpose and vent port for safe aeration.

Optional wall mounting kit is available. Maximum capacity in regard to free air delivery, when connected to WOS-35 is 120 Nm³/min.

TECHNICAL DATA

Type	Pipe size	Hosetail connections	Dimensions [mm]				Volume	Mass
	inch		A	B	C	D	L	kg
WOS CD 2	3/4"	2	257	88	20	140	0,6	1,2

WOS CD 12	3"	12	795	240	59	140	20,0	12,9

ACTIVATED CARBON TOWERS

TAC SERIES ACTIVATED CARBON TOWER

operating pressure	0 to 16 bar
operating temperature	1,5 to 45 °C

DESCRIPTION

TAC activated carbon towers have been developed for separating oil vapours from compressed air (dry type separation).

TAC series is made from high quality carbon steel. Flow distributors ensure uniform distribution of air flow through activated carbon bed. Oil vapours as well as some other hydrocarbons are separated due to adsorption process.

Super fine coalescing filter is required upstream TAC and 1 µm dust filter is recommended downstream to intercept activated carbon dust.

High pressure version is available on request.

Stainless steel version available on request.
High pressure version available on request.

Replace activated carbon every 12 months or sooner if required. Check residual oil content with oil indicator monthly.

CHAMPION

by Gardner Denver

Smart and affordable

Champions piston compressor range is designed to cover all the possible professional uses of compressed air. Our piston compressors in various forms and sizes, provide a truly complete range of choice.

Champion stationary rotary screw compressors, both fixed and variable speed drive, are the answer to the needs of industry and of small/medium-sized companies.

The complete range is designed for continuous operation under the most severe conditions of use, with particular attention to modularity, energy consumption, low operating and maintenance costs, and ease of installation and use.

A modern production system and process demands increased levels of air quality. Our complete **Air Treatment Range** ensures product quality and efficient operation.
